Portage

Located 20 Miles east of Johnstown on Route 53, Portage evolved around Plane #2 of the Old Portage Railroad. Established in the 1830s, its industrial heritage included lumber mills, coal mines and the railroad.

Portage Station Museum

This two-story brick structure, located at 400 Lee Street, Portage, PA, was built in 1926 by John T. Gray and Son. Until 1954 it served as a train station on the Pennsylvania Railroad. For several years after the station closed, the local Knights of Columbus used the building. Later it was used by Stager Enterprises for storage.

In the spring of 1992, the Portage Rotary Club donated artifacts from their Mainline Mining Museum. Thanks to the generosity of the Stager family, the Portage Area Historical Society now operates the facility as the "Portage Station Museum."

First Floor

The first floor of the museum houses the Station Master's office and the waiting room with its lighting fixtures, oak wainscoting and woodwork, all original to the train station. After purchasing tickets, passengers would leave the building and walk to the railroad underpass. They then walked up a set of concrete steps located at the center of this underpass to a covered waiting area between the sets of tracks where they waited for and boarded the train.

Portage Area Historical Society events are held on the first floor. Items with local appeal are displayed in the vintage show cases, some permanent, others changing on a yearly basis. A full early 20th century kitchen setup depicts a life style of a time gone by.

The **Museum Store and Gift Shop** is also located on the first floor. It offers a variety of moderately-priced items including T-shirts, sweatshirts, railroad caps, train whistles, toys for the kids, and hard coal figurines.

The 2012 collectible, the **Waldorf Hotel**, is on sale at both the Station Museum and the Portage Library. Lost to a fire in February of 2012, this unusually shaped three-story building sat on the corner of Main Street and Caldwell Avenue for over 100 years.

Our award-winning book, *Portrait of a Town - Portage, Pennsylvania 1890-1990* is still available for \$40 and now available on CD for \$10.

A soft covered book titled *History of the Portage Area 1976* is also on sale for a mere \$2.00.

63 MEN DOWN: This national award winning video, filmed locally, tells the story of the Sonman Mine disaster of 1940.

GLORY DAYS: Tells the story of the Cambria County Industrial Baseball League. Copies of both are available on VHS and DVD for \$20 plus tax. Visitors can view these two films at the museum on a large screen television.

A large mural of Mountain Avenue during the 1920s can be seen on the building next to the museum.

Second Floor

The second floor of the train station was originally used for storage of freight. Today mining artifacts are on exhibit along with a 3D layout of all of the mines once located in the area. A reference section lets visitors look at historical documents, old pamphlets, past museum exhibits, and a collection of hundreds of old photos.

"**Miniature Mainline**" - Our 173 square-foot HO model train display, designed and constructed by train enthusiast Charles Edwards, draws many visitors to the museum. Local railroad attractions such as the Horseshoe Curve, the Gallitzin Tunnels, and the Mule Shoe Curve, are a few of the structures built into the display. The entire project was funded by the late Robert "Bing" James.

Trains from different time periods, including the famous K4 steam engine, can be operated on the various tracks. As many as 40 cars can be seen moving around the tracks on just one train with numerous trains traveling at the same time.

Trains run on the first Saturday of each month from 12 to 5 pm. Arrangements can be made for other dates and times by calling the museum at 814-736-9223. So stop by, bring the kids, and enjoy the delights of the "Miniature Mainline".

Outdoor Viewing Platform

Train enthusiasts can enjoy the view from the new second floor platform as both passenger and freight trains pass close by.
